Infringement Chart for U.S. Patent No. 11,318,227	
Claim Element	Infringement by ACTIVBRAID Suture
1a A method of treating a tissue defect in a subject comprising:	<p>On information and belief, Embody has used its ACTIVBRAID suture in testing the efficacy and safety of the product to treat a tissue defect in a subject. Zimmer's customers have also used the ACTIVBRAID suture.</p>  <p>Embody, LSI USA '22 Emerging Medtech Summit Presentation (hereinafter, "LSI Presentation") at slide 2.</p> <p>"Sutures consisting primarily of biological materials for the surgical repair, rejoining or regeneration of tissues." <i>Id.</i></p>
1b Implanting at the tissue defect a scaffold comprising	The use of ACTIVBRAID involves implanting a scaffolding at the tissue defect.

EXHIBIT O

ACTIVBRAID includes a scaffold:

“ActivBraid is a collagen and ultra high molecular weight polyethylene (UHMWPE) co-braid suture that provides a structure for biointegration to facilitate new tissue formation, without compromising strength. ActivBraid is designed to support a strong repair for demanding orthopedic applications.” See <https://www.zimmerbiomet.com/en/products-and-solutions/specialties/sports-medicine/activbraid.html> (last visited August 25, 2023).

“Biostimulative collagen stimulates angiogenesis, promotes new collagen formation and bio-integration.” See LSI Presentation at slide 14.

“MICROBRAID facilitates cell attachment and proliferation.” *Id.*

Id. at slide 15.

EXHIBIT O

MICROBRAID Overview

Advantages over conventional High-Strength Orthopedic Sutures:

- Biologic: Biostimulative collagen stimulates angiogenesis, promotes new collagen formation and bio-integration.
- Balanced: Controlled degradation of collagen as remodeling occurs, retaining strength of UHMWPE fibers
- Biocompatible: Novel cross-linking has no associated inflammatory response.
- Strength: Comparable strength to conventional UHMWPE products (i.e. FiberWire) for high demand applications such as RCR, M/L Instability, etc.)
- Versatile: RFR 1.5mm & 2.5mm, #2 RND, 2-0 RND

Product attributes are highly tuneable based % and size of collagen fiber

EXHIBIT O

Biointegrative Suture

ActivBraid is a collagen co-braid suture that provides a structure for biointegration to facilitate new tissue formation, designed to support a strong repair.^{1,2}

See <https://www.zimmerbiomet.com/en/products-and-solutions/specialties/sports-medicine/activbraid.html> (last visited September 20, 2023).

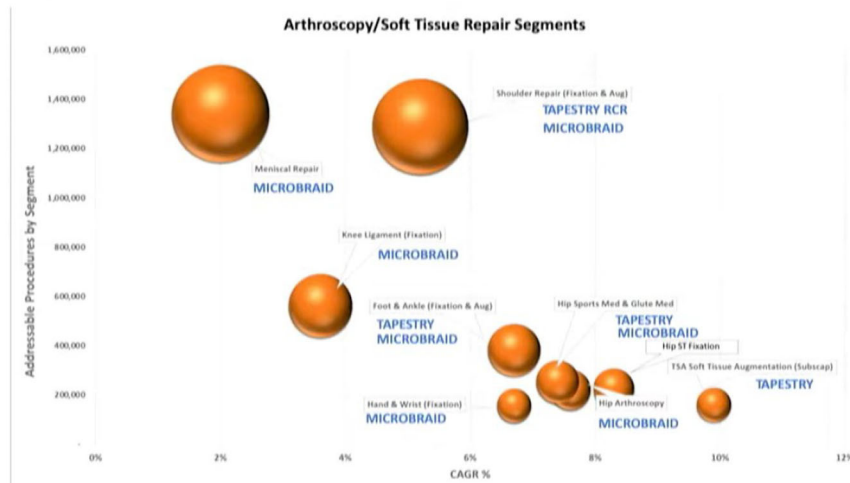

1e applying the scaffold to the tissue defect to repair a tendon, a ligament or a nerve defect.

Use of the ACTIVBRAID suture involves applying it to the tissue defect to repair a tendon, a ligament, or a nerve defect.

“ActivBraid is a collagen and ultra high molecular weight polyethylene (UHMWPE) co-braid suture that provides a structure for biointegration to facilitate new tissue formation, without compromising strength. ActivBraid is designed to support a strong repair for demanding orthopedic applications.” See <https://www.zimmerbiomet.com/en/products-and-solutions/specialties/sports-medicine/activbraid.html> (last visited August 25, 2023).
